Purpose. Biohacker is a mobile app for people who want to improve their focus, fitness, sleep and long-term health with supplements and learn about them safely. The supplement world is full of hype, and beginners rarely know what a compound does, how much to take, or whether it is legal. Biohacker organizes information the same way as the Max Pharma compound tree (family › group › compound). It includes only substances that are legal to buy over the counter in the United States. Steroids, SARMs, research peptides and prescription drugs are left out on purpose.

Goal. The goal of the app is to turn research into safe habits and real knowledge. Users browse 32 legal compounds with doses, evidence grades and cautions, build a daily stack, and log doses in a journal. To make learning stick, Biohacker adds a game. Quizzes are generated directly from the library, and each grade (A–F) earns cash and XP. XP raises the user's level, which unlocks new equipment, floor and wall styles, and a larger floor in a virtual 3D gym. Users design the gym and place machines, which attract customers who produce hourly revenue. The meaningful result is a user who knows safe dosing and keeps a consistent routine.

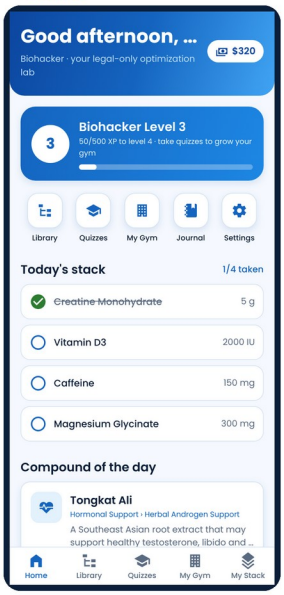

Tools and Components. The app is built with React Native and Expo. React Navigation provides a root native stack with five bottom tabs (12 pages plus 3 modals). It has a NavigationContainer, SafeAreaProvider and StatusBar, custom Poppins fonts, a splash screen, and a constants theme file with a blue and white palette. Layouts use useWindowDimensions to fit every screen and orientation. Concepts used: TextInputs with validation, Linking and web-loaded images, useMemo, useLayoutEffect and useEffect, Alerts, icons, Switches, linear gradients, Modals, FlatLists and map, multiple-orientation support, and app-wide state management with the Context API and useReducer. It sends HTTP requests to the PubChem API. It also uses community components and native device features: AsyncStorage for internal storage, expo-haptics for vibration feedback, expo-local-authentication for a biometric lock, and react-native-svg to draw the 3D gym.

Biohacker – App Mock-up (1/3)

Core screens: learn, track and log

1 Home

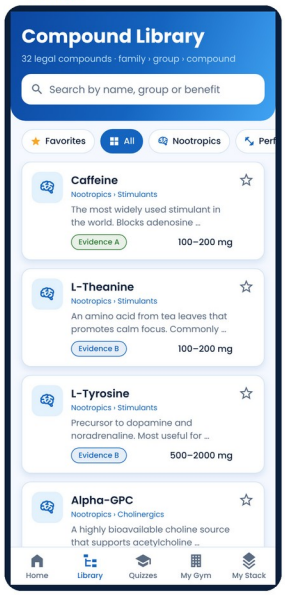

Bottom tab

- Gradient header, greeting, cash pill
- Level/XP card (links to Quizzes)
- Quick-link icon buttons
- Today's stack checklist (map)
- Compound of the day (useMemo)
- Linking to source compound tree

2 Compound Library

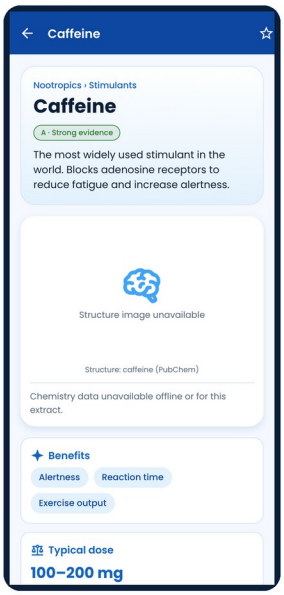

Bottom tab

- Search TextInput with validation
- Family filter chips (horizontal map)
- FlatList of compound cards (1–3 cols)
- Favorite star toggle (icons)

3 Compound Detail

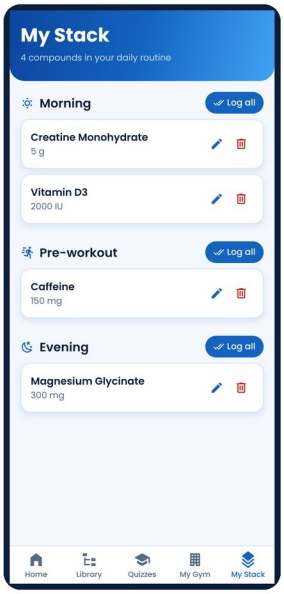

Stack screen

- useLayoutEffect sets header + favorite
- Web-loaded structure image (PubChem)
- HTTP fetch: formula & weight (useEffect)
- Benefits, dose, cautions sections
- Add to stack / Log dose → Dose Modal
- Linking: Examine, PubMed, PubChem

4 My Stack

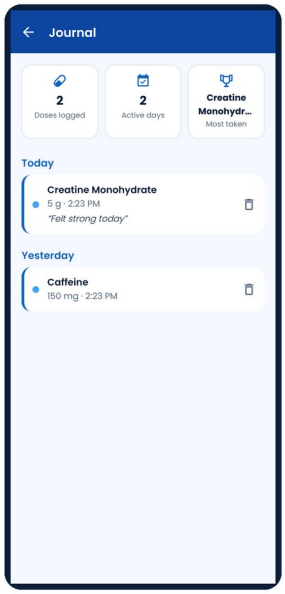

Bottom tab

- Grouped by Morning / Pre-workout / Evening
- Edit (Dose Modal) & remove (Alert)
- 'Log all' per time slot
- Saved to internal storage

5 Journal

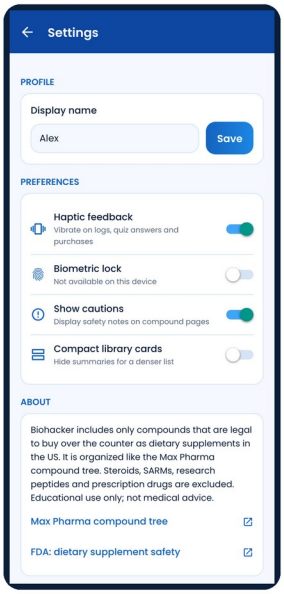

Stack screen

- Stats cards (doses, days, most taken)
- FlatList grouped by day
- Delete entry with Alert confirm

6 Settings

Stack screen

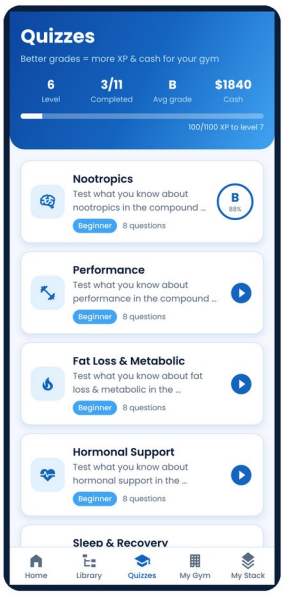

- Name TextInput with validation
- Switches: haptics, biometric lock, cautions, compact
- Biometric (Face ID / fingerprint)
- Reset data (Alert), About + links

Biohacker – App Mock-up (2/3)

Gamification: quizzes unlock the virtual 3D gym

7 Quizzes

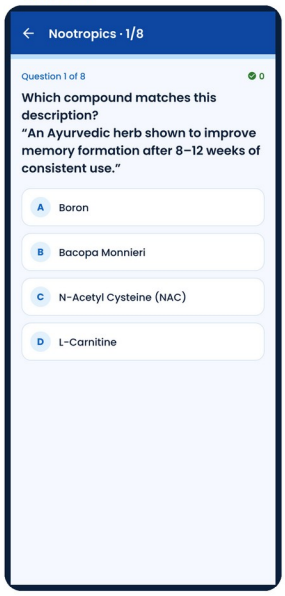

Bottom tab

- Level, completed, avg grade, cash
- XP progress bar
- FlatList of 11 quizzes + best grade

8 Quiz Play

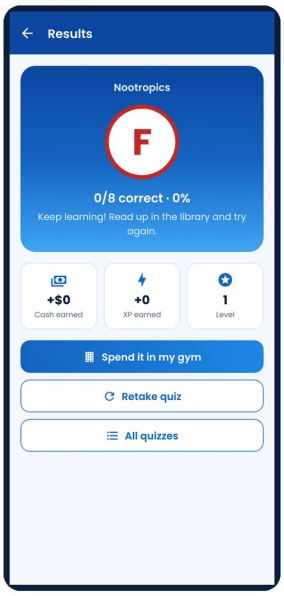

Stack screen

- Animated progress bar
- Multiple-choice answers (map)
- Right/wrong feedback + explanation
- Haptics; Alert before quitting

9 Quiz Result

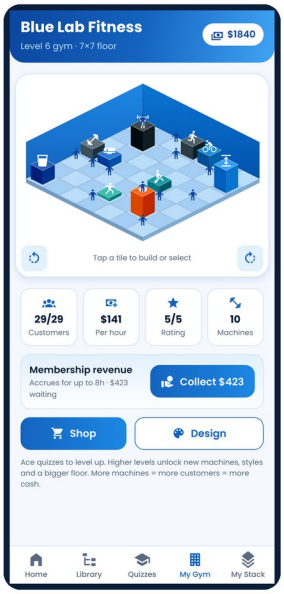

Stack screen

- Animated grade badge A–F
- Cash + XP earned, level
- Level-up unlock list
- Go to gym / retake / all quizzes

10 My Gym (3D)

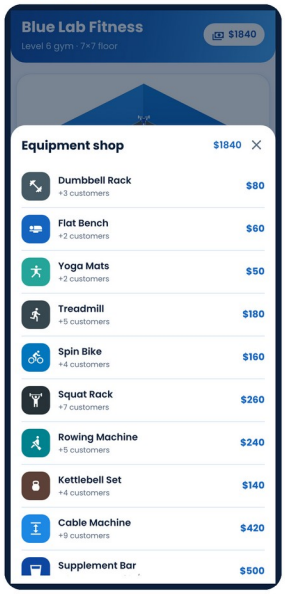

Bottom tab

- Isometric 3D gym (react-native-svg)
- Rotate camera 90°, tap tiles to build
- Animated customers walking
- Stats: customers, $/hr, rating
- Collect revenue; Move/Rotate/Sell

11 Equipment Shop

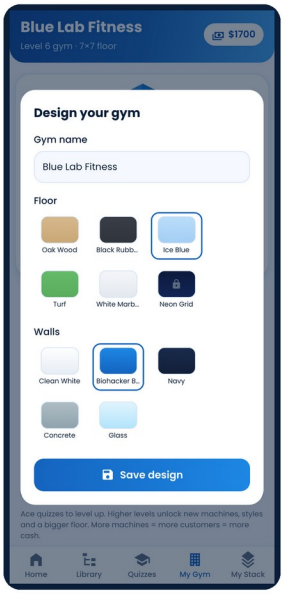

Modal (M2)

- 15 machines unlock by level
- Cost, customers drawn, bonus income
- Alert if locked or too expensive

12 Gym Design

Modal (M3)

- Gym name TextInput + validation
- Floor & wall style swatches
- Locked styles show required level

Biohacker – Navigation Map & Modals

NavigationContainer → Native Stack (root) → Bottom Tabs

App.js
SafeAreaProvider · Context Provider · Splash · Fonts · StatusBar · Biometric lock

↓

Root Native Stack Navigator
Tabs + stack screens below

↓

Bottom Tab Navigator

- 1 Home
- 2 Library
- 7 Quizzes
- 10 My Gym
- 4 My Stack

Stack screens (pushed on top of tabs)

- 3 Compound Detail
- 5 Journal
- 6 Settings
- 8 Quiz Play
- 9 Quiz Result

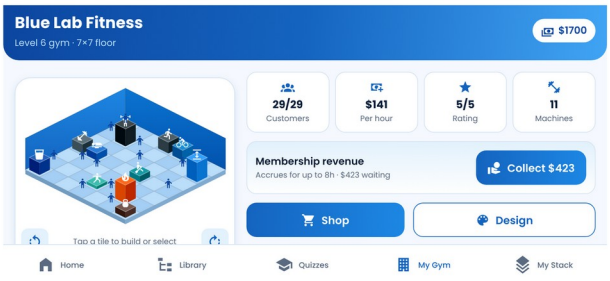

Modals (do not count as pages)

M1 Dose Modal
Add to stack / log dose · TextInput validation · Alert

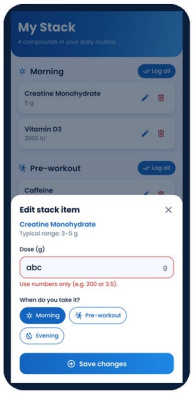

M2 Equipment Shop
FlatList of machines · level locks · cost

M3 Gym Design
Gym name TextInput · floor & wall styles

Landscape orientation: the Gym re-flows into two columns

Learning → reward loop:
Library (read compound info)
→ Quizzes (questions built from that info)
→ Result: grade A–F → cash + XP
→ XP raises level → unlocks machines, floor/wall styles, bigger floor
→ Gym: buy & place machines → customers → hourly revenue

M1 Dose Modal

- Numeric TextInput
- Inline error message
- Slot chips (map)
- Alert if dose is
- above typical range
